SOFTWARE LICENSE AUDIT

INTEK System Solutions, Inc.

What would a Software License Audit reveal about your organization today?

Protect Your Company's Software Assets

Software has been viewed as one of the most valuable assets of the Information Age. With thousands of vendors, operating everywhere from computer superstores to the Internet, it is almost impossible to **determine if the software being purchased is legitimate**.
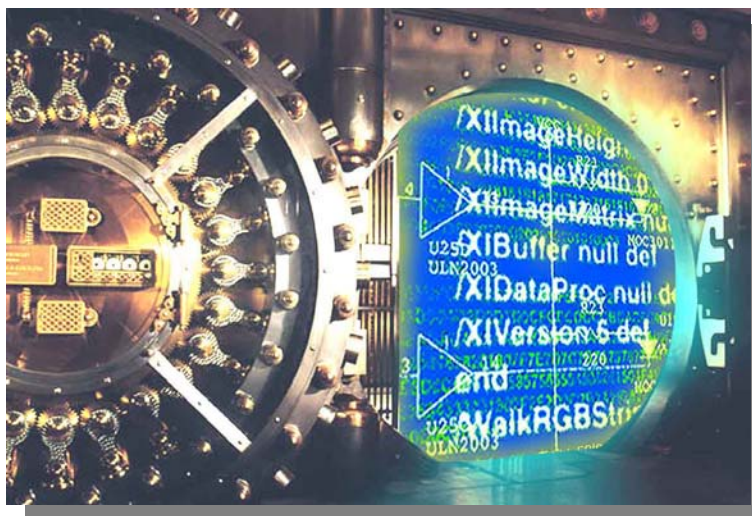

In spite of efforts to implement and maintain a strong licensing policy, there is still a chance that unauthorized software can make its way into networks, systems and websites threatening the **license compliancy of businesses, schools and government agencies alike**.

License Audits and their potential findings can be overwhelming, which may be why many businesses do not make license audits a priority until a crisis flares up. While protection against license breaches requires investments in technology, services, and personnel, it also requires an adjustment in corporate culture and policies.

INTEK **has developed a suite of offerings that review software installations and** [proactively manage license compliance]. We will determine your software usage and, if necessary, help you acquire the licenses you need to avoid costly penalties. Whether driven by agencies like the Business Software Alliance (BSA) or simply for *greater peace of mind*, having a software inventory system is the foundation to managing software assets.

Software License Audit Services Include:

- **Basic Consulting Service** – Senior Systems Engineer will work with you to setup your inventory system and train your staff to procure effectively.

- **Software Reporting Service** – Senior Systems Engineer provides a "turn-key" solution including setup, workstation and server inventory collection and reporting services

- **Software Reporting Service & Reconciliation** – IntelliMark will assist you in reviewing your licensing agreements to document and substantiate your compliance.

- **Software Summary Report** – A report of all software being used will be provided at the end of the inventory.
